Henry Rayner

Boston, MA • henryrayner0@gmail.com • (401) 662-6686

Technical professional with software engineering experience supporting Agile product development while collaborating across Product, Design, and Engineering teams. Strong analytical and problem-solving skills with experience translating business requirements into user stories and software solutions. Seeking to transition into a product management role by leveraging a strong technical and analytical foundation.

Education

Brown University, *Bachelor of Arts in Computer Science* May 2022 | Providence, RI

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Deep Learning, Computer Systems, Computer Vision, Graphics, 2D Game Engines

Experience

Capital One, *Associate Software Engineer* Aug 2022 - Oct 2024 | Cambridge, MA

- Built and shipped full-stack features for internal applications using React, TypeScript, and Python on AWS, supporting the full software development lifecycle from requirements through production release.
- Collaborated with Product, UX, QA, and Engineering teams to translate business requirements into prioritized user stories and scalable software features.
- Participated in Agile ceremonies including backlog refinement, sprint planning, and retrospectives, contributing to feature prioritization and sprint execution.
- Helped define user flows, acceptance criteria, and technical requirements to align feature scope, support development, and facilitate successful feature delivery.
- Analyzed and resolved production issues and user-impacting bugs, collaborating with teammates to identify process improvements and enhance system reliability and user experience.
- Optimized SQL queries across relational databases, significantly reducing execution times and enabling faster business analysis and decision-making
- Developed reusable UI components that enhanced usability, streamlined recurring workflows, and improved engineering efficiency.
- Contributed to CI/CD and Docker workflows to improve deployment reliability and support efficient release processes.

Northrop Grumman, *Software Development Intern* Jun 2020 - May 2022 | Newport, RI

- Developed software systems using C#/.NET with a focus on performance, reliability, and maintainability in simulation environments.
- Debugged and optimized complex applications, improving system stability and execution efficiency.
- Worked within structured software development processes, contributing to reliable software delivery and cross-functional collaboration.

Skills & Certification

Product:	Agile/Scrum, Requirements Analysis, User Stories, Cross-functional Collaboration
Data & Analytics:	SQL, PostgreSQL, Snowflake
Programming:	TypeScript, JavaScript, Java, Python, C#, C++
Frontend:	React, Angular, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend & Infrastructure:	Node.js, REST APIs, AWS, Docker, Jenkins, CI/CD, Microservices
Tools & Platforms:	Jira, Confluence, Git, Postman, Lucidchart, Microsoft Office, Google Workspace
Certification:	AWS Certified Solutions Architect - Associate

Leadership and Activities

CODEPATH, *Technical Coach* 2022-2025

Mentored students in data structures, algorithms, and full-stack development, emphasizing debugging and problem-solving skills

CAPITAL ONE CODERS, *Mentor* 2022-2024

Guided middle school students in Boston through web development projects and an introduction to software careers.
